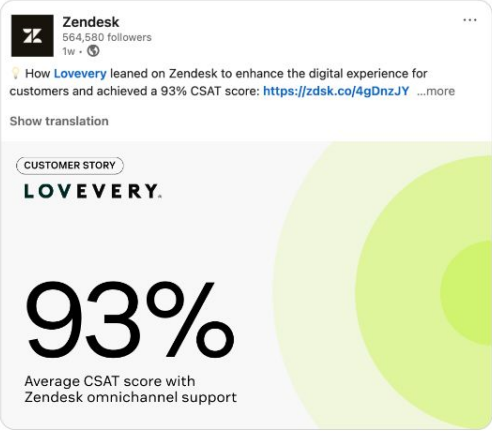
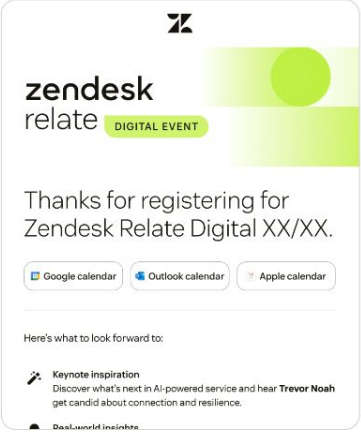
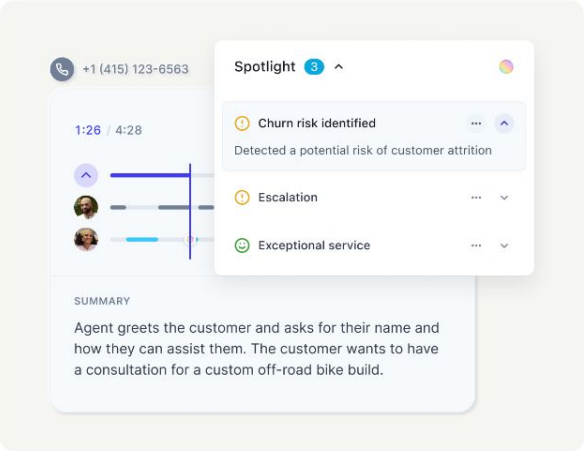
Using Matcha as an accent color

- Use Matcha as an attention grabber to invite action or put emphasis on information. Examples include CTAs, highlighting words in headlines, and promo banners.
- Use Matcha as a powerful ending note at the end of an experience, whether it's a webpage, a presentation or a video. and ease.
- Use Matcha for brand recognition through patterns and color devices.

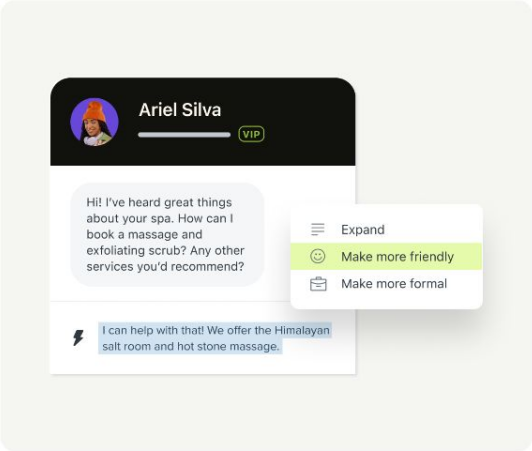




Style details



Rounded corners
Combine corner angles, edge angles, and curves to distinguish between layered product features. Customization should always follow 4px increments. Apply a 20px radius to standalone imagery and overlays, while rectangular elements use 4-16px radii.



Headers
Header bars give structure to key information and UI elements. They're especially useful for highlighting customer conversations or drawing attention to specific features—always keeping things clear and consistent.

Avatars in messaging
Avatars overlap the chat window by 4px to create more focus and space for the messaging. This stylistic approach helps break out of the frame and emphasizes the people within the conversation. Use it for static and animated imagery.

Best practices for content hierarchy

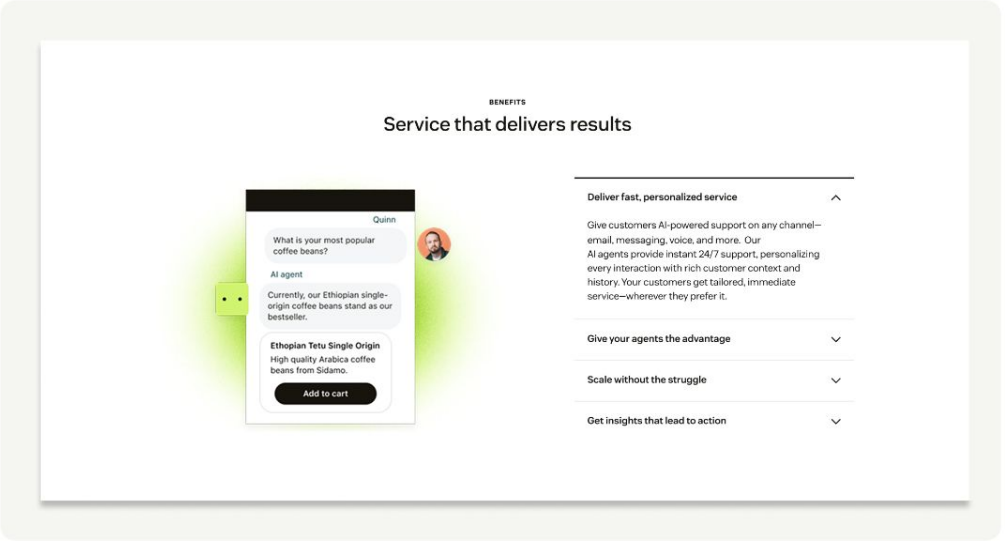
Supertitle/Eyebrow (Optional)
- Straightforward descriptor
- Good for SEO
- Best for section titles like "Overview, features, testimonials, etc."

Headline (~ 30 characters)
- Focuses on one idea
- Lead with verb if possible
- Convey confidence and spark interest
- Use sentence case unless there's a proper noun

Body copy (~80 characters)
- 2-3 sentences
- Speaks to the customer benefit or value
- Clear, concise, and informative

Feature headlines
- Make the feature actionable
- Focus on what the user can do
- Describe the value of the feature
- Remove jargon or confusing feature titles
- Use headline best practices

CTAs (2-3 short active words)
- Follow standard CTA and greenhouse conventions
- Keep CTAs consistent with other pages/buttons for usability
- Register now, Join the action, Start free trial, Contact Sales



Keeping it simple

Start with standard shapes that everyone understands. Simple circles, rectangles, and lines tell our data story clearly and directly.
